Description

Ascentac FiberVERA TestMate1300 Series, Variable Optical Attenuator, is an online attenuation amount adjustment device used to control the optical power in a fiber. It enables precise optical power control featuring low insertion loss, low Polarization Dependent Loss (PDL) and low Wavelength Dependent Loss (WDL).

It has Ethernet RJ45, RS232 and USB interface. With the Ethernet interface, the variable optical attenuator can be controlled remotely over the network. This variable optical attenuator also provides dual power supplies (AC & DC) to achieve power redundancy.

The 1U-high chassis design is convenient for mounting in a standard-sized, 19"-wide rack.
